The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/805,350	Applicant(s) PARK ET AL.	
	Examiner Reginald L. Alexander	Art Unit 1761	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 3, 4 and 26 are rejected under 35 U.S.C. 102(a) as being anticipated by Lee.

There is disclosed in Lee a bread maker comprising: an oven compartment; a pair of kneading drums 11, 13; a mixing bag 7; a drum driver; a rotation sensor 30, 41, 50, 61, including a disk and disk sensor; a controller 70; a baking tray 15; a bar code scanner 29; and heaters. It is apparent from the specification that the rotation sensor senses a rotation of at least one kneading drum and controls the drum driver and thereby the rotation of the kneading drum based upon information obtained from the bar code scanner. The rotation is obviously done at a slow, or what can be defined as a slow pace. The decreasing of torque can be obtained by a mere reduction in speed. As interpreted, the claim language is met by the prior art reference.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 3, 4 and 26 are rejected under 35 U.S.C. 102(b) as being anticipated by WO 92/10100.

There is disclosed in WO 92/10100 a bread maker, comprising: an oven compartment 212; a pair of kneading drums 230, 232; a mixing bag 100; a rotation

sensing part 270; a controller (programmable microprocessor); a baking tray 218; dough blocking members 224, 226; and heaters; wherein the sensor reads a bar code on the bag as it is rotated by the drums and the controller rotates the kneading drums according to the information provided. See rejection above for further defining of the operation of the device.
